

ABSTRACT

A reinforcing non-woven base fabric that is formed through processes in which a group of warp yarns, composed of a plurality of reinforcing fiber yarns that are aligned in a fixed direction with fixed intervals or closely, is superposed on a group of fusion-bonding multifilament yarns made of composite fibers that are aligned in a direction perpendicular to the fixed direction so that the two groups are bonded to each other through fusion-bonding, and a manufacturing method and a manufacturing machine for such a reinforcing non-woven base fabric.
